

RESPONSE AND AMENDMENT

The undersigned would submit the following in reference to the specific concerns the examiner raised in the Office Action Summary dated April 4, 2005 and to hopefully put this application in line for allowance.

IN THE SPECIFICATION:

The examiner has objected to the specification.

The undersigned is submitting a substitute specification in order to clarify the exact details of the invention.

The second embodiment, which is not considered to be enabling, is also explained in the amendment to the specification in order to make it enabling.

No new matter is being added by the amendment to the specification.
